For Immediate Release

23rd September, 2015

Not everyone wants to watch TV under water but CorrosionX proves you can

Some say that Corrosion X is the world's greatest lubricant, penetrator and anti-seize. CorrosionX kills rust and corrosion while being safe on electronics and simultaneously the most powerful, effective anti-corrosive available and one of the safest and least harmful.

CorrosionX is electronically safe and will not short sensitive circuits or interfere with electrical connections. It is safe to use on electrics and electronics up to 36,000 volts. It will clean contact points and improve connectivity and shuts down electrolysis. It will prevent and eliminate battery terminal corrosion without damaging plastic or rubber.

What it does is that it prevents and stops corrosion, as well as, displaces moisture, salt crystals, and other corrosion causing electrolytes. It lubricates under heavy loads and high temperatures and penetrates faster and further than other penetrators through rust and corrosion. It frees parts, bearing and valves that are seized and will create a self-healing film.

CorrosionX is currently used in a multitude of applications for Navy Defence, Aviation, Marine Auto, Agriculture (food safe) and in the home.

SOS Marine is now New South Wales distributor.
