

## Press Release

### For Immediate Release

19 August 2015

#### **NEW SOS RECOVERY LADDER A VALUE ADDITION TO RESCUE EQUIPMENT**

The high quality and unique design of SOS Marine's equipment is so well respected and highly regarded that 12 National Defence Forces worldwide are experiencing the SOS Australian quality.

SOS Marine is keeping rescue 'fast & smart' with the release of their new product the SOS Recovery Ladder. This new innovation solves the worldwide problem of lifting a person in wet clothes from the water level to the deck of your boat. The SOS recovery ladder answers that difficult question for all boaters.

Even if you either go intentionally for a swim or fall overboard most boats do not have an ability to get you back on board. "If you don't have some method in place it is too late to figure how to get a tired and exhausted person back on board," says SOS Marine spokesperson.

The SOS Recovery Ladder advantage is easy to deploy as it's designed for simplicity and speed. The compact bag is an integral part of the ladder. The SOS Recovery Ladder is incorporated and packed into a high visibility neon yellow mesh bag weighting around 3.3kilos and folded is only 500mm x 300mm, size similar to a ladies handbag. At a retail price of \$175 this ladder is great value for money. It has 4 deck attaching points and 6 mounting steps and a deployed length of 2.25 metres.

The SOS Recovery Ladder is rescue ready as it can be used in conjunction with lifting halyards attached to the outer end of the ladder to assist hoisting a person on board.

SOS Marine is keeping it simple by improving affordable Rescue equipment for both marine professionals and the leisure industry.
