## BACK BY POPULAR DEMAND!

### The World's Most Effective and Long-Lasting Corrosion Inhibitor Spray

**Max Wax** is a tough, synthetic wax-based, resilient corrosion inhibitor barrier coating that provides long-term protection for metal surfaces. It forms a smooth, even coating for maximum protection even in the harshest environments and underwater.

**Max Wax** dries faster than other wax-based corrosion inhibitors and it will not harden, crack or lose resiliency even in sub-zero temperatures, and it can withstand temperatures exceeding 200 C / 392 F. Its ultra-thin viscosity allows penetration between and around close fitting components to prevent moisture, gasses or chemicals from causing rust or corrosion. Product is acid resistant.

## VCI (Vapour Corrosion Inhibitor) Technology

**Max Wax** emits a time-release Vapour Corrosion Inhibitor (VCI) for added benefit when applied in confined areas. The VCI forms an invisible coating that protects items not covered by the wax, such as tools in a toolbox, engines in an engine compartment, or electrical switches and components in an electrical box or cabinet

## SAMPLE USES

- Ideal for short or long-term storage of parts, motors, machined parts and equipment
- Pipe and steel plate coating.
- Under body coating.
- Perfect for concrete forms and accessorised used extensively in the pre-stressed concrete industry for long-term storage of steel forms.
- Excellent for protecting underwater cables, submersible pumps and running gear on ocean going vessels.

## DIRECTIONS

Clean surfaces to be treated to remove dirt, grim, oil or other foreign matter. A light, uniform coating provides best results. Drying time is 4-12 hours depending on the humidity and temperature.

**Removal:** Apply Corrosion Technologies' Bio Solve (an environmentally friendly, bio-based cleaner and degreaser), wait 10 seconds and wipe off.
