

Rust Reconverter

Rust Converter & Protective Coating/Primer

No more scraping and painting rusted metal! **Rust Reconverter LT** stops further rust and corrosion on any metal surface by chemically converting rust into a hard, black, organic "shell" with a clear, acrylic coating. The coating itself is sufficient to last for years, but it is also an excellent primer for latex, epoxy and oil-based paints. Rust Reconverter extends the life of anything made of metal. **Removes rust and leaves a protective primer shell all in one quick and easy step!**

Rusted floor lift painted with **Rust Reconverter LT**

Great For:

- Any metal surface that can be painted
- Ships and workboats
- Water treatment and sewage processing equipment and facilities
- Commercial swimming pools and resorts
- HVAC systems
- Metal structures and buildings
