

SpeedX

THE ULTIMATE EXTREME PRESSURE LUBRICANT WITH POLAR BONDING CAPABILITY. PROVIDES THE LOWEST CO-EFFICIENT OF FRICTION MEASURABLE ON METAL-TO-METAL WEAR SURFACES

SpeedX thrives under heavy loads and high temperatures. Actually polar bonds to the metal surface and will not sling off. It penetrates into sealed bearings.

Oils normally used for lubrication are displaced by moisture and pressure so their effectiveness is diminished. Even under the best circumstances, they don't last very long. Not so with SpeedX. It actually polar bonds to metal and hugs it like a magnet. SpeedX releases the surface tension of moisture, displaces it and maintains a fantastic lubricating capability.

Use SpeedX for remarkable lubrication of:

- In-line Skates
- Skateboards
- Roller Skates
- Bicycles Gears
- Derailleurs
- Chains and Bearings
- Other Sports Equipment
