Mobilarm announces launch of sMRT Inflatable Dan Buoy

- Expanding the use of our current product portfolio to other applications
- Solution for vessels and fixed marine installations of any size

Mobilarm subsidiary Marine Rescue Technologies (“MRT”) today announced the launch of the sMRT SOS Dan Buoy, developed in partnership with SOS Marine. The sMRT Dan Buoy is an additional solution available for vessels and fixed marine installations of any size. Portable and simple to use, the sMRT Dan Buoy can be thrown into the water providing a floating marker for a person to swim towards and await rescue. The integration of MRT’s sMRT beacon technology allows the tracking of the dan buoy and also provides an alarm mechanism to alert the vessel to commence the rescue.

MRT CEO Ken Gaunt commented: “We are continuously looking to provide our customers with all potential life saving solutions. The sMRT SOS Dan Buoy is another solution with which our customers can address their man overboard risks. This product is a clear alternative for those environments in which individual protection is not viable such as large passenger vessels. SOS Marine are leaders in purpose built safety equipment. We have enjoyed a great working relationship which allowed us to work together to provide a comprehensive solution that combines the strengths of each Company.”

SOS Managing Director Ross Spencer added: “We are very excited to further enhance our portfolio of solutions. The sMRT SOS Dan Buoy is a very easy to use product that delivers improved safety to commercial and recreational seafarers. Working together with MRT we were able to customise and deliver a very effective solution for all of our customers”.
