Marine safety equipment for off-shore industrial work-force

SOS Marine is an ISO 9001 manufacturer of specialised marine rescue equipment purpose-built for the defence, law enforcement, industrial marine and high risk marine tactical operations.

Our company supplies safety equipment to 12 Defence Forces world-wide and one of the few companies world-wide to purpose-design and manufacture safety equipment to suit marine workplace requirements.

The SOS Dan Buoy and Sea Scoopa design offers pioneering ways to respond to an emergency situation. These rescue devices offer a new dimension in safety and functionality in a man overboard situation with advantages for both rescue teams and the person overboard.

SOS Marine's new safety equipment concept has enabled water-front risk management teams improve their capabilities and effectively promote safety procedures to manage their work-place Occupational Health and Safety (OH &S) obligations.
